

WORLD CLASS TECHNOLOGY

The new ROTO-BELT^a from Fletcher combines the ease and simplicity of wheel sanding with the superior performance of belt sanding systems. With ROTO-BELT^a you can change profiles in a matter of minutes by simply changing contoured polymer contact wheels. An elastic sanding belt is placed around the wheel and a quick turn of one hex screw tightens the ratchet mechanism to conform and secure the belt to your profiled wheel.

MADE IN THE UNITED STATES

Unlike composite wheel sanders, the diameter and shape of the ROTO-BELT^a wheel does not change. When the sanding media wears out, just replace it. This ensures consistently superior performance for any given profile run. ROTO-BELT^a is more aggressive than plastic sanding wheels, handling tougher applications like hardwoods and end grains. Field tested to deliver 6 to 8 times the belt life of other wheels at 1/3 the cost, ROTO-BELT^a is performance made economical.
